

Corvid Echo Project

Enhancing technical support using AI

Echo Functional Model

Internship Objectives

1. Echo Mobile App

- a. **Vision** - Scan device display photos and detect the status of the device and report to the server along with the photo and results
- b. **Messenger** - Support text based chat. Create groups. Share files (images/videos/documents)
- c. **Audio/Video Call** - Using WebRTC add support for audio and video call through the Messenger
- d. CRUD user interfaces for User

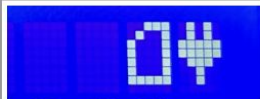

2. Echo Server

- a. Messenger Backend APIs
- b. Storing Photos, Audio and Video files in Google Drive
- c. APIs for Users, Messenger, Devices and Device Status Reports
- d. APIs to establish WebRTC session

Vision: LCD - Content Design

Vision: Device Status Indications

INDICATION	SIM CARD FOUND ?	GPRS SERVICE AVAILABLE ?	GPRS SIGNAL STRENGTH	POWER SOURCE
	No	-	-	Main
	Yes	No	-	Main
	Yes	Yes	Excellent	Battery
	Yes	Yes	Good	Main
	Yes	Yes	Fair	Main
	Yes	Yes	Poor	Main

Tools & Technologies

Backend: Java 26, Spring Boot, PostgreSQL database

Frontend: Android SDK (preferably with Java), WebRTC

Development Tools:

- Android Studio for frontend
- Eclipse/Spring Tools for backend
- pgAdmin/DBeaver for database client
